CANNABIS USE AND PAIN EXPERIMENT
RECRUITING NOW!!

Cannabis has been anecdotally linked to pain relief for centuries but little is known about the biology of cannabis and pain.

In this study we aim to explore how cannabis use affects the body's pain circuitry by comparing pain sensitivity between two groups of people:

Group 1: Non-cannabis using volunteers, and
Group 2: Regular cannabis users (for at least the last 2 years).

- You need to be at least 18 years of age
- Be a regular cannabis user (for the cannabis using group)
- Be prepared to submerge your hand into a cold bucket of icy water for up to 3 minutes
- Be willing to give blood samples to aid in interpreting differences in the biology of pain reactivity.

If you would like to know more, please call the trial coordinator on

0403 824 513 or email **tark4763@gmail.com**

Participation in this study is voluntary & completely confidential. You will be reimbursed for your time.
